PLANT BREEDERS

DE WET PLANT BREEDERS

DE WET PLANT BREEDERS have modernised the general horticultural industry with better options to create spectacular environmentally sustainable gardens.

We hybridise mainly endemic Southern African plant species to create new colourful, hardy, fast growing ornamental garden or pot plants. Our hybrids flower profusely for longer periods and special care is given to heat, drought and disease resistance.

The purpose of this publication is to provide landscape architects, landscapers and the avid gardener with information about all our new and existing commercially available indigenous Agapanthus, Aloe and other ornamental plant hybrids. Descriptions and how to care for them are also covered.

De Wet Plant Breeders has a proven track record all over the world and has won numerous prestigious international awards, including **"PLANT OF THE YEAR 2023"** at the Chelsea Flower Show in the UK and **"BEST NEW PERENNIAL-2021"** at the IPM HORTICULTURAL SHOW in Essen, Germany.

De Wet Plant Breeders also have many new horticultural innovations in their plant breeding programmes that fill an exciting pipeline of "Game Changers" that have either been released or are in various stages of development and pre-release.

As they say in the advertising world: **WATCH THIS SPACE!**

THE NERDS

Andy de Wet's Bio

Since 1973, whilst studying to obtain his master's degree in botany, Andy started his scientific Aloe breeding. It was a long, difficult road doing landscaping to pay the bills to raise a family, whilst also buying properties and setting up the two facilities, **CND Nursery** and **The Aloe FARM**. He controls the overall operations and future planning of the De Wet organisation.

Andy's experience and vast collection of variable and quality early hybrids formed the initial basis of the extensive improvement activities of De Wet Plant Breeders. He is directly involved in all the breeding programmes and loves the planning and selection, and especially the marketing of new cultivars.

Quinton Bean's Bio

Quinton joined Andy in 2005 and his pivotal continuous contribution earned him a well deserved stake in **De Wet Plant Breeding**. As plant breeder he is highly respected by most of the biggest nurseries worldwide, and his maverick approach has led to many new directions in our plant breeding programmes.

Quinton is highly respected in South African horticultural circles for his expert knowledge of plants and technical horticulture. His influence has assisted in raising the quality and service levels of our activities to excellent levels.

AGAPANTHUS

Agapanthus are extremely well suited for gardening as they are exceptionally tolerant towards heat and drought. They are easy to grow, evergreen and still perform well even when neglected.

Agapanthus are heavy feeders and do best when planted in rich, loose soil, preferably with some bonemeal. They should be fed at least twice annually with 3.1.5 organic fertilizer.

These superior Agapanthus were bred by Andy de Wet and Quinton Bean of De Wet Plant Breeders for the world wide ornamental plant market. This 35 year scientific breeding programme have produced the worlds leading cultivars. Their creations have won numerous prestigious international awards including Agapanthus Blackjack's "Best new plant of 2023" at the Chelsea International Flower Show in the UK.

However, good breeders are never satisfied and thus the breeding goes on. The pipeline of new and even more exciting Agapanthus is getting longer and the good characteristics already achieved are continuously being improved on. New game changing colours are also being developed and the existing colours intensified.

The Aloe Farm holds an annual Agapanthus FESTIVAL over Oct/Nov, when many of our secret breeding plants are displayed (not for sale) and great specials are offered to all that visit.

AGAPANTHUS 'ALEXANDER'

Cultivation: Full sun to light shade
Size: ± 50cm x 50cm
Tolerance: Hardy
Flowering time: mid-Summer

A nice, medium to large size Agapanthus. Very unusual multi coloured flowers, shades of mauve and purple on a full umbel! Flowers up to 60cm tall. Neat, attractive, green foliage. A real collector's item.

AGAPANTHUS ALWAYS BLUE

Cultivation: Full sun to light shade
Size: ± 35cm x 40cm
Tolerance: Hardy
Flowering time: early Summer with some re-blooming

An older variety, small to medium size, fast growing Agapanthus with medium blue flowers. Flowers early Summer to late Summer. Mature plant size can vary according to growing conditions and climate.

AGAPANTHUS BINGO BLUE

var. 'Andbin'
PBR ZA 20207016

Cultivation: Full sun to light shade
Size: ±. 40cm x 40cm
Tolerance: Hardy
Flowering time: Spring to Summer with sporadic reblooming

An exceptional small to medium size, fast growing Agapanthus with prolific dark blue flowers. Flowers late Winter to mid-Summer with sporadic blooms during the year as well. Very long flowering period. Mature plant size can vary according to growing conditions and climate.

AGAPANTHUS BINGO WHITE

var. 'WP001'
PBR ZA 20207020

Cultivation: Full sun to light shade
Size: ± 40cm x 40cm
Tolerance: Hardy
Flowering time: Spring to Summer with sporadic reblooming

An exceptional, small to medium size, fast growing plant. A prolific show of white flowers from late Winter through to mid-Summer with sporadicblooms during the remainder of the year as well. Good re-bloomer with a very long flowering period! Mature plant size may vary due to growing conditions and climate. Excellent companion for Agapanthus 'Bingo Blue'.

AGAPANTHUS BLACKJACK

var. 'DWAgHyb02'
PBR pending PT10217

Cultivation: Full sun to light shade
Size: ± 50cm X ± 40cm
Tolerance: Hardy
Flowering time: 3 Months in Summer

An exceptional medium to large size fast growing, floriferous Agapanthus with very dark purple flowers that appear nearly black. Flowers in mid-Summer with some re blooming in late Summer. Medium size umbels with good flower count. Flower stems up to 60cm tall, mature plants size may vary according to climate conditions. Neat, attractive, dark green foliage. Fast growing. **Blackjack is a real game changer!!**

AGAPANTHUS BLUE ICE

var. 'DW AG B&W'
PBR ZA 20073617

Cultivation: Full sun to light shade
Size: ± 60cm x 50cm
Tolerance: Semi-Hardy
Flowering time: Mid-Summer, with some sporadic re-blooming

Blue Ice is one of our oldest cultivars, a medium to large size Agapanthus with blue and white bicoloured flowers. Flowers early to mid-Summer with sporadic re-blooming during the year as well. Mature plant size can vary according to growing conditions and climate.

Agapanthus Blue Thunder

var. 'SDB002'
PBR ZA 20237983

Cultivation: Full sun to light shade
Size: ± 40cm x 40cm
Tolerance: Hardy
Flowering time: Several months in Summer

An exceptional medium size, Agapanthus with prolific very dark blue flowers. Compact and neat. Flowers mid-Summer. Mature plant size can vary according to growing conditions and climate.

Agapanthus Blush Pink

var. 'DWAGHYBPI'
PBR Pending

Cultivation: Full Sun/ Shade
Size: Mature plant size may vary according to climate conditions. Size +/- 50cm x +/-50cm
Tolerance: Hardy
Flowering time: Flowers in mid-Summer

Wow!!! World's first pink Agapanthus!!!! Very special bi-coloured flowers, white with real pink! Flowers up to 50cm tall. Neat, attractive, green foliage. Released February 2025.

Agapanthus Buccaneer

var. 'AMDB002'
PBR ZA 20207014

Cultivation: Full sun to light shade
Size: ± 35cm x 40cm
Tolerance: Hardy
Flowering time: Summer with excellent re-blooming through the year

An exceptional medium size, fast growing Agapanthus with prolific dark blue flowers. Flowers early Summer to late Summer with good re-blooming during the remainder of the year as well. Very long flowering period. Mature plant size can vary according to growing conditions and climate.

Agapanthus Early Mauve

var. 'Andmau'
PBR ZA 20207021

Cultivation: Full sun to light shade
Size: ± 35cm x 35m
Tolerance: Hardy
Flowering time: Early Summer

A small to medium sized, easy growing Agapanthus with unusual mauve flowers in profusion in Spring, re-blooms sporadically. Mature plant size can vary according to growing conditions and climate.

Agapanthus 'Emerald Ice'™

var.
PBR

Cultivation: Full sun to light shade
Size: ± 50cm x 50cm
Tolerance: Hardy
Flowering time: Mid-Summer

Special collector's item!! Green buds opening to greenish-white flowers. Flowers up to 60cm tall. Very profuse flowering. Neat, attractive, green foliage. DECIDUOUS.

Agapanthus Fireworks

var. 'MDB001'
PBR ZA20237980

Cultivation: Full sun to light shade
Size: 45cm x 50cm
Tolerance: Hardy
Flowering time: Early to mid-Summer

An exceptional, medium size Agapanthus. A prolific show of semi-pendulous bicoloured white and blue flowers from early Summer to mid-Summer with some sporadic blooms during the remainder of the year as well. Neat, attractive foliage. When in full flower the umbel of this Agapanthus resembles an explosion of fireworks. Mature plant size may vary due to growing conditions and climate.

Agapanthus Great White

var. 'Andaval'
PBR ZA 20135260

Cultivation: Full sun to light shade
Size: ± 50cm x ± 50cm
Tolerance: Hardy
Flowering time: Mid-Summer and occasional re-bloom in late Summer

Pure white flowers. Large and impressive dense umbels with a high flower count, flowers more than once a year. Mature plant size can vary according to climate and conditions. Flowers up to 1m. Very compact attractive short dark green foliage. Great White is the benchmark in large white Agapanthus.

Agapanthus 'Ice Angel'

Cultivation: Full sun to light shade
Size: ± 50cm X ± 50cm
Tolerance: Hardy
Flowering time: Mid-Summer

Pure white flowers. Large and impressive umbels with a high flower count, flowers more than once a year. Mature plant size can vary according to climate and conditions. Established clumps make an amazing show. Flowers up to 80xm. Attractive dark.

Agapanthus Lady Luck

var. 'Andlad'
PBR ZA 20207017

Cultivation: Full sun to light shade
Size: ± 35cm x 35m
Tolerance: Hardy
Flowering time: Mid-Summer

A small to medium sized, easy growing Agapanthus with unusual pale mauve/lilac flowers in profusion in early to mid-Summer. Full sun to light shade. Mature plant size can vary according to growing conditions and climate.

Agapanthus 'Marshmallow'

Cultivation: Full sun to light shade
Size: ± 50cm x 50cm
Tolerance: Hardy
Flowering time: Mid-Summer

An nice medium size, fast growing Agapanthus. Very unusual lilac coloured, attractive flowers. Flowers up to 50cm tall. Neat, attractive, green foliage.

Agapanthus 'Mauve Mystique'

Cultivation: Full sun to light shade
Size: ± 50cm x 50cm
Tolerance: Hardy
Flowering time: Mid-Summer

A nice large size Agapanthus. Very unusual lilac and white flowers on a nicely rounded umbel. Flowers up to 50cm tall. Neat, attractive, grey/ green foliage. A real collector's item.

Agapanthus Medium White 'Blanco'

Cultivation: Full sun to light shade
Size: ± 50cm x 50cm
Tolerance: Hardy
Flowering time: Mid-Summer

An exceptional medium size, floriferous Agapanthus. Medium size umbels with good flower count. Flowers up to 50cm tall. Neat, attractive, green foliage.

Agapanthus Midnight Sky

var. 'DWAgHyb01'
PBR pending

Cultivation: Full sun to light shade
Size: ± 50cm x 50cm
Tolerance: Hardy
Flowering time: Mid to late Summer with sporadic reblooming

A medium to large size, floriferous Agapanthus. Exceptionally dark blue flowers! Medium size umbels with good flower count. Flowers up to 70cm tall. Neat, attractive, green foliage.

Agapanthus 'Multi Magic'

Cultivation: Full sun to light shade
Size: ± 60cm x 50cm
Tolerance: Hardy
Flowering time: Mid-Summer

A really unusual Agapanthus! Large size. Flowers in mid-Summer. Very unusual multi branched flower heads! Flowers up to 80cm tall. Neat, attractive, green foliage. A real collector's item!

Agapanthus 'Nana White Supreme'™

Cultivation: Full sun to light shade
Size: ± 40cm x 40cm
Tolerance: Hardy
Flowering time: Extremely floriferous from Spring to mid-Summer

An exceptional, small size, fast growing plant. A prolific show of white flowers from Spring through late-Summer. Mature plant size may vary due to growing conditions and climate. Excellent companion for Agapanthus Bingo Blue.

Agapanthus Poppin' Purple

var. 'MP003'
PBR ZA 20237982

Cultivation: Full sun to light shade
Size: ± 40cm x 40cm
Tolerance: Hardy
Flowering time: Late Spring flush with all year round re-blooming

An amazing medium sized, easy growing Agapanthus, strong flowering with unusual purple flowers in early Summer to late Summer. A very good re-bloomer, producing flowers in other times of the year too. Full sun to light shade. Mature plant size can vary according to growing conditions and climate.

Agapanthus Purpalicious

var 'MP001'
PBR ZA 20237981

Cultivation: Full sun to light shade
Size: ± 40cm x 40cm
Tolerance: Hardy
Flowering time: Mid-Summer with some re-blooming

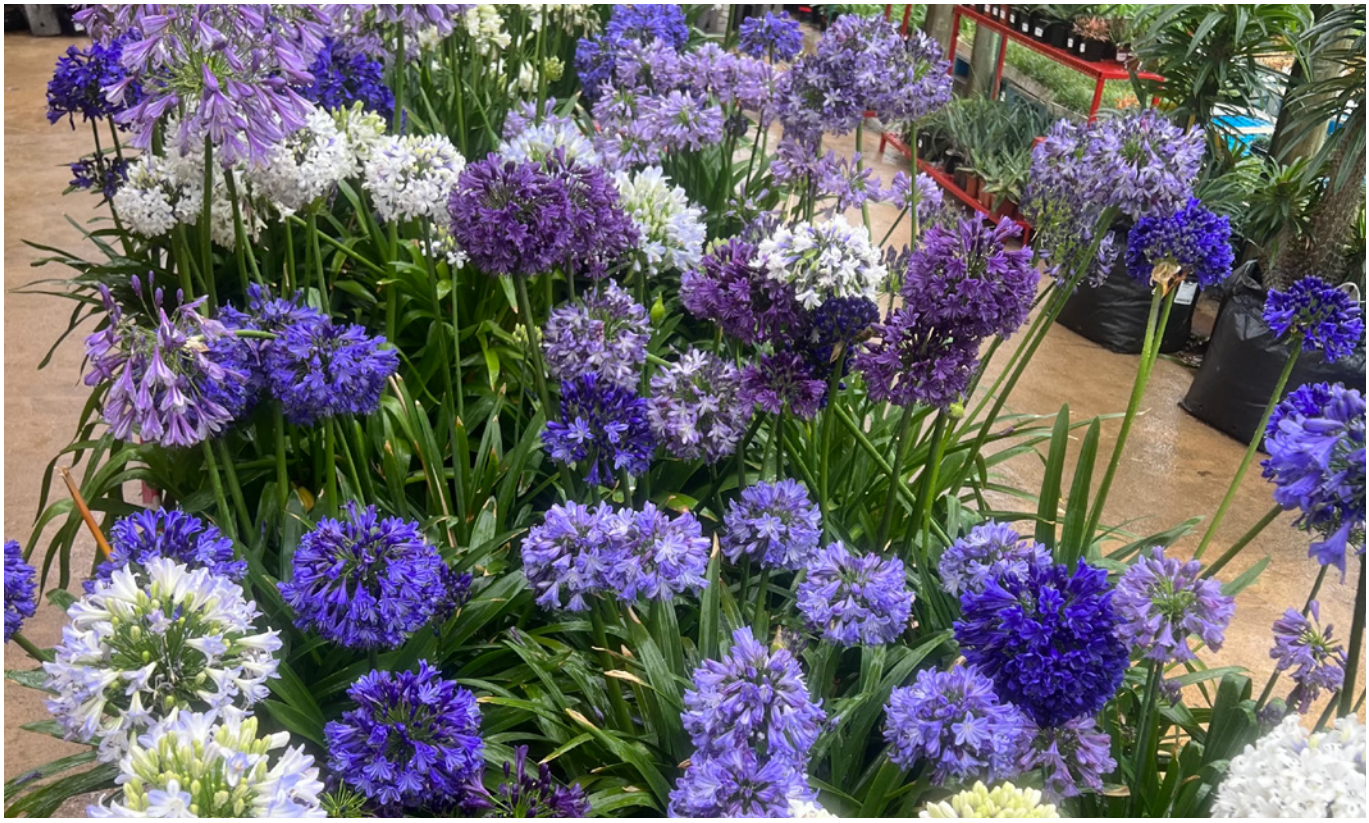

A nice medium size, fast growing and floriferous Agapanthus. Very attractive purple flowers! Flowers up to 50cm tall. Neat, attractive, green foliage.

Agapanthus Sky

Cultivation: Full sun to light shade
Size: ± 50cm x 50cm
Tolerance: Hardy
Flowering time: Mid-Summer

'SKY' A nice large size Agapanthus. Very unusual pale blue and white flowers on a full umbel! Flowers up to 50cm tall. Neat, attractive, grey/green foliage. A real collector's item. Flowers in mid-Summer. Mature plant size may vary according to climate conditions.

Agapanthus Snow Ripple

var. 'Andsno'
PBR ZA 20207022

Cultivation: Full sun to light shade
Size: ± 55cm x ± 40cm
Tolerance: Hardy
Flowering time: Late Winter to mid-Summer

An exceptional medium size, fast growing plant. A prolific show of white flowers from late Winter through to mid-Summer with sporadic blooms during the remainder of the year as well. Good re-bloomer with a very long flowering period! Mature plant size may vary due to growing conditions and climate.

Agapanthus Sugar Plum

var. 'Ampu001'
PBR ZA 20207015

Cultivation: Full sun to light shade
Size: ± 40cm x 40cm
Tolerance: Hardy
Flowering time: Mid-Summer with good re-blooming through the year

A small sized, easy growing Agapanthus with unusual deep purple flowers in early Summer, reblooms sporadically throughout the year. Mature plant size can vary according to growing conditions and climate.

Agapanthus Twist Again

var. 'DWAGHYB05'
PBR pending

Cultivation: Full sun to light shade
Size: ± 40cm x 40cm
Tolerance: Hardy
Flowering time: Late Winter to mid-Summer with all year round re-blooming

An exceptional, small to medium size, fast growing plant. A prolific show of bi-colour flowers from late Winter through to mid-Summer with sporadic blooms during the remainder of the year as well. Good rebloomer with a very long flowering period! Mature plant size may vary due to growing conditions and climate.

Agapanthus Twister

var. 'AMBIC001'
PBR ZA 20207013

Cultivation: Full sun to light shade
Size: ± 40cm x 40cm
Tolerance: Hardy
Flowering time: Early to mid-Summer

A medium size, fast growing Agapanthus with intense blue and white bi-coloured flowers. Flowers early to mid-Summer with sporadic blooms during the year as well. Mature plant size can vary according to growing conditions and climate.

ALOES

The importance of ornamental Aloes has previously been underrated as domestic and commercial garden plants. Continuous changes in the weather make Aloes essential in future horticulture due to their ability to withstand hot, dry conditions. Their appealing architectural foliage and amazing diverse floral displays makes them exceptionally suitable in the modern horticultural scene that is always looking for something new.

The original species are adapted to specific field conditions and are often not suitable as garden plants. The work De Wet has put into the improvement of the genus since 1973 has resulted in the emergence of complex but amazing new hybrids.

Aloe Hedgehog is a household name. It was the pioneer in releases in South Africa and is the most successful Aloe so far. The many follow-ups, such as Peri-Peri, Charles, Havenga's Pride, Orange Delight, etc., have also become popular. New exciting and always better Aloes are released annually from De Wet Plant Breeders' exciting pipeline of continuous breeding. Aloes are drought-resistant and our hybrids are vigorous, making them grow well in irrigated landscape situations while still being excellent drought-resistant plants.

The flowers of all Aloes remain tender to severe frost. Still several of our Aloe cultivars were bred to flower outside the cold season, making them more suitable in colder gardens. De Wet Plant Breeding's Aloe cultivars flower much more than conventional Aloe species: and thus have more environmental benefits. Many nectar-feeding bird species, bees, butterflies, and other beneficial insects are sustained and attracted to your garden during the dry Winter months when they cannot find nourishment and food elsewhere, as most other plants are dormant.

These superior released cultivars from De Wet Plant Breeders, have been through strict trial and selection procedures, making them spectacular premium products. It takes several years to determine that there are no hidden genetic weaknesses that will detract from their superior performance. They have more vigour and are generally much easier to grow.

Their predictable shapes and sizes, as well as known flower times and colours, make it easy for garden designers to create the unique "look" they want for a particular setting.

Aloes are sun-loving plants, so plant them in in a sunny spot in richly composed soil, with added phosphate in the form of bonemeal or Talborne 2.3.2. Your Aloe garden should also not become waterlogged during the rainy season.

ALOE ADRIENNE

var. 'ANDadr'
PBR ZA20114836

Cultivation: Sun, little or lots of water, rich soil.
Size: Small cluster, up to 600mm
Flowers: Jun – July (Gauteng RSA)
Cold Tolerance: -6°C
Released: 2009

Adrienne is a vigorous, medium-sized Aloe with bi-coloured flowers in mid-Winter. It grows easily and it's structured, slightly re-curved grey leaves with pronounced marginal spines make it a desirable specimen for various applications. Adrienne can be prone to Aloe cancer under certain conditions.

ALOE 'ANDY'S CRIMSON'

Cultivation: Full sun/light shade. Rich well drained soil. Moderate watering
Size: ± 1.9m x 1.8m
Flowers: July - Early August (Gauteng, RSA)
Cold Tolerance: -3°C (Short periods)
Released: 2016

A large shrub type Aloe with truly amazing blood red flowers! Well established plants produce a profusion of flowers. Attractive green foliage. Grows fast and easily. A show stopper!

ALOE 'ANDY'S ORANGE'

Cultivation: Sun - light shade. Little or lots of water
Size: ±.1.8m x 1.3m
Flowers: May – Aug (Gauteng RSA)
Cold Tolerance: -6°C
Released: 2013

'Andy's Orange' is a vigorous and spectacular shrub type Aloe hybrid, bred to strongly resemble Aloe arborescens in growth habit. It produces a profusion of inflorescences with orange flowers. Very fast and easy growing plant, ideal for large containers, gardens and commercial landscapes. High resistance to Aloe cancer and other Aloe diseases.

ALOE ARBORESCENS ANDY'S RED

Cultivation: Sun, little or lots of water, rich soil
Size: Small cluster, up to 600mm
Flowers: June – July (Gauteng RSA)
Cold Tolerance: -6°C
Released: 2009

'Andy's Red' is a vigorous and spectacular form of red Aloe Arborescens. It produces many inflorescences and young plants also flower well. Peak flowering time is from late May/early June to late July (in South Africa).

Aloe arborescens 'Andy's Yellow'

Cultivation: Sun or semi-shade, little or lots of water, rich soil
Size: Multi-stemmed, up to 1.5m
Flowers: May – June (Gauteng)
Cold Tolerance: -6°C
Released: 2007

Andy's Yellow' is also Andy's personal selection as it is undoubtedly one of the most vigorous and spectacular forms of yellow Arborescens. It produces more inflorescences than conventional forms of A. Arborescens and even young plants will flower well. Peak flowering time is from late May/early June to late July (in South Africa). Resistant to Aloe cancer.

Aloe 'Autumn Haze'

Cultivation: Sun, little or lots of water, rich soil
Size: Stemless, seated Aloe, ± 200mm x 300mm
Flowers: Jan – June (Gauteng, RSA)
Cold Tolerance: -6°C
Released: 2013

Autumn Haze' makes a profusion of delicate pinkish-orange flowers more than once a year, normally in January/February and then again in Autumn. A medium size shrub Aloe, that is resistant (not immune) to Aloe cancer.

Aloe Bafana

var. 'Bafana'
PBR ZA 20114764

Cultivation: Sun, little or lots of water, rich soil
Size: Shrub 1.8m x 1.5m
Flowers: May – July (Gauteng RSA)
Cold Tolerance: -3°C
Released: 2010

Its green leaves and masses of bright flowers made 'Bafana' a perfect choice for us to support our soccer team in the 2010 World Cup. It is however slightly more susceptible to frost damage. 'Bafana' flowers twice a year. By far the best Aloe to attract sunbirds! It is a spectacular Aloe that is a vigorous grower and has a high resistance to Aloe cancer and most Aloe diseases.

Aloe Baby Cloud

var 'ANDbab'
PBR ZA PT6981

Cultivation: Sun, little or lots of water, rich soil
Size: Stemless, seated Aloe, 200mm x 300mm
Flowers: June – Aug (Gauteng, RSA)
Cold Tolerance: -6°C
Released: 2013

Baby Cloud is a stemless Aloe with interesting spotted foliage and is suitable for mass or group plantings. Baby Cloud produces well-branched inflorescences bearing a cloud of pink flowers. Baby Cloud was bred to be an improvement on wild type maculate Aloes (spotted Aloes), and will be a welcome addition to any garden. It has a medium growth rate and is resistant to Aloe cancer.

Aloe 'Ballerina'

Cultivation: Full sun/light shade. Rich well drained soil. Moderate watering.
Size: ± 40cm x 50cm
Flowers: June – July (Gauteng, RSA) Cold
Tolerance: -5°C (Short periods)
Released: 2019

A charming small Aloe with unusual open mouthed, bi-coloured pink to white flowers. Neat, upright foliage. Well suited to containers or mass planting. Resistant to Aloe cancer.

Aloe 'Bonfire'

Cultivation: Sun, little or lots of water, rich soil
Size: ± 1.5m x 1.1m
Flowers: May - July (Gauteng - RSA)
Cold Tolerance: -4°C
Released: 2022

A wonderful shrub type Aloe with a slightly more compact growth habit. 'Bonfire' has a high production of inflorescences with orange flowers. 'Bonfire' is an easy growing Aloe that will even flower when still relatively small.

Aloe 'Bountiful Bronny'

Var 'Bountiful Bronny'
PBR ZA 20114766

Cultivation: Sun, little or lots of water, rich soil
Size: Small cluster, up to 400mm
Flowers: Starting in late Winter it carries on flowering for several months
Cold Tolerance: -4°C
Released: 2011

This small Aloe has atractive bi-coloured pink to creamy white flowers. It is a medium to fast growing Aloe. 'Bountiful Bronny' has a neat full rosette of attractive grey leaves. It is an Aloe that is well suited to small gardens and mass planting as well as container gardening.

Aloe 'Bushwhacker'

Var 'Bushwhacker'
PBR 20135362

Cultivation: Sun, little or lots of water, rich soil
Size: Short stem with side shoots, 700mm x 600mm
Flowers: May – June
Cold Tolerance: -4°C
Released: 2012

Bushwhacker' has an abundance of pink to creamy white flowers that are produced in late May to June. This remarkably showy medium sized Aloe grows at a relatively fast rate and is great as an individual, but looks even better in a pot or when planted in masse. 'Bushwhacker' has a high resistance to most Aloe diseases.

Aloe 'Calabash'

Cultivation: Full sun/light shade, rich well drained soil, moderate watering
Size: ± 70cm x 80cm
Flowers: June – July (Gauteng, RSA)
Cold Tolerance: -5°C (Short periods)
Released: 2016

A charming and sculptural Aloe resembling Aloe Ferox but with a much shorter stem. A slower growing variety, 'Calabash' produces dense racemes of red flowers that are very attractive. 'Calabash' looks great in gardens or containers with its very attractive foliage. Resistant (not immune) to Aloe cancer.

Aloe 'Candy Stripes'

Cultivation: Full sun/light shade, rich well drained soil, moderate watering
Size: ± 150cm x 100cm
Flowers: May to late July and will re-bloom in Summer (Gauteng, RSA)
Cold Tolerance: -3°C (Short periods)
Released: 2018

A vigorous shrub type Aloe similar to Aloe 'Fireball' but with beautiful bi-coloured flowers in real profusion. Established plants in flower are a real show stopper! 'Candy Stripes' may exhibit susceptibility to Aloe cancer under some conditions.

Aloe Caroline

Var 'ANDcar'
PBR PT 6980

Cultivation: Sun/semi-shade, rich well drained soil, medium watering
Size: ± 1.5m x 1m
Flowers: June – Aug (Gauteng, RSA)
Cold Tolerance: -4°C
Released: 2013

A wonderful medium to large shrub type Aloe, attractive grey foliage with toothy leaf margins. Large shiny bicoloured red to white flowers in mid-Winter. Moderately fast growing with good disease resistance. Bears a resemblance to Aloe Charles but in a much smaller package, an advantage for small gardens or mass planting.

Aloe Casper

Cultivation: Sun, little or lots of water, rich soil
Size: ± 1m x 1.2m
Flowers: June – July (Gauteng RSA)
Cold Tolerance: -4°C
Released: 2023

'Casper' is a vigorous, medium-sized shrub Aloe with abundant bi-coloured pink to white flowers in mid-Winter. It grows easily and fast. 'Casper' can be prone to Aloe cancer under certain conditions.

Aloe Charles

Var 'ANDcha'
PBR ZA20114763

Cultivation: Sun, little or lots of water, rich soil
Size: 2.0 m x 1.5m
Flowers: June – July (Gauteng RSA)
Cold Tolerance: -7°C
Released: 2009

This is undoubtedly one of the most spectacular large Aloes available. The abundant racemes of Charles are strong red to white bi-colour that are simply breathtaking. It grows easily and would generally become single-stemmed with several dichotomous branches. It is perfect for making a statement en masse or as a specimen in a large rockery or design. The peak flowering time is early July to early August (in South Africa). Highly resistant to most Aloe diseases.

Aloe 'Crimson Cloud'

Cultivation: Sun/semi-shade, rich well drained soil, medium watering
Size: ± 200mm x 500mm
Flowers: June – Aug (Gauteng, RSA)
Cold Tolerance: -5°C

Cold Tolerance: -5°C (Short periods)
Released: 2022

Starstruck is a stemless Aloe with attractive spotted foliage and is suitable for singular or group plantings. Produces well branched inflorescences bearing unbelievable masses of showy yellow flowers, long flowering season. It has medium growth rate.

Aloe Sunrise

Var 'ANDsun'
PBR PT6979

Cultivation: Sun or semi-shade, little or lots of water, rich soil
Size: ± 400mm x 350mm
Flowers: April – June (Gauteng, RSA)
Cold Tolerance: -5°C
Released: 2012

Sunrise is a medium size Aloe with an apt name, the flowers are a dazzling bicoloured red/orange to yellow/gold. Sunrise flowers in early Winter before the frosts, which makes it very suitable for gardening in cold areas. To date Sunrise is seemingly immune to Aloe cancer.

Aloe 'Sunset'

Cultivation: Sun/light-shade, little or lots of water, rich soil
Size: ± 1.5m x 1.1m
Flowers: July - Aug
Cold Tolerance: - 4°C (Short periods)
Released: 2021

A wonderful shrub type Aloe with a slightly more compact growth habit. 'Sunset' has a high production of inflorescences with orange flowers. 'Sunset' is an easy growing Aloe that flowers later in the Winter season.

Aloe 'Tazzy'

Cultivation: Full sun/light shade. Rich well drained soil. Moderate watering
Size: ± 4cm x 10cm
Flowers: Early Winter and sporadically throughout the year (Gauteng, RSA)
Cold Tolerance: -1°C (Short periods)
Released: 2019

'Tazzy' is an attractive short stemmed plant with spreading leaves. 'Tazzy' has dense inflorescences of attractive red to white bi-coloured flowers in mid-Winter. Excellent rockery plant used to substitute Aloe vanbalenii in landscapes. Good resistance to Aloe cancer.

Aloe Tiger Eye Orange

var. 'ANDvol'
PBR ZA20135356

Cultivation: Sun, little or lots of water rich soil
Size: ± 70cm x 80cm
Flowers: Sporadically throughout the whole year (Gauteng RSA)
Cold Tolerance: -5°C (Short periods)
Released: 2011

A stemless Aloe, 'Tiger Eye' is very popular as it flowers many times through the year with spectacular shiny orange flowers.

Aloe 'Tiger Eye Red'

Cultivation: Sun, little or lots of water rich soil
Size: ± 70cm x 80cm
Flowers: Sporadically throughout the whole year (Gauteng RSA)
Cold Tolerance: -3°C (Short periods)
Released: 2022

A stemless Aloe, Tiger Eye Red is very popular as it flowers many times through the year with spectacular shiny red flowers.

Aloe 'Twice as Nice'

var. 'TWICE AS NICE'
PBR ZA 20135360

Cultivation: Sun/light-shade, little or lots of water, rich soil
Size: ± 40cm x 40cm
Flowers: May to June (Gauteng, RSA)
Cold Tolerance: -4°C (Short periods)
Released: 2012

A small to medium shrub type Aloe, 'Twice as Nice' has striking red to white bi-coloured flowers that make a show in beginning of Winter. Twice as Nice grows easily and forms clumps of attractive plants.

Aloe 'White Rhino'

Cultivation: Full sun/light shade, rich well drained soil, moderate watering
Size: ± 1.8m x 1.m
Flowers: Early June to Late July (Guateng, RSA)
Cold Tolerance: -5°C (Short periods)
Released: 2018

A tall single stemmed Aloe that can branch dichotomously. Attractive grey foliage. Very special and stunning white flowers. Much faster growing than the white form of Aloe Ferox.

Aloe 'Zelda'

Cultivation: Sun/semi-shade, rich, drained soil, medium or less watering
Size: 300mm x 300mm
Flowering time: May – June (Gauteng)
Cold Tolerance: -4°C
Released: 2006

This small Aloe has attractive bi-coloured pink to creamy white blooms in early Winter. 'Zelda' is a medium to fast growing Aloe. The peak flowering time is April/May. 'Zelda' has a neat full rosette of attractive grey leaves. It is an Aloe that is well suited to small gardens and mass planting as well as container gardening.

MINIATURE ALOES

ALOE 'BEAUFORT'

Cultivation: sun/light shade, rich well drained soil moderate watering
Flowers: July - Aug (Gauteng - RSA)
Size: ± 13cm x 15cm
Cold Tolerance: -4°C (short periods)
Released: 2022

A miniature stemless, clump forming Aloe best suited to containers or in rockeries. Neat and compact rosette 'Beaufort' has neat and compact rosettes and produces very large orange flowers for a small plant.

ALOE 'BLONDIE'

Cultivation: Light shade, rich well drained soil moderate watering
Flowers: May - Aug (Gauteng - RSA)
Size: ± 12cm x 15cm
Cold Tolerance: 0°C (short periods)
Released: 2019

A miniature Aloe best suited to containers or in rockeries. Very attractive pale green/ white foliage. 'Blondie' produces pink to reddish flowers.

ALOE 'CATO'

Cultivation: Full sun/light shade, rich well drained soil moderate watering
Flowers: May - June (Gauteng - RSA)
Size: ± 20cm x 25cm
Cold Tolerance: -3°C (short periods)
Released: 1980

A small shrub type Aloe well suited to containers, garden or in rockeries. Attractive, fine grassy foliage. 'Cato' produces unusual pale white ish flowers.

ALOE 'CRUNCHY'

Cultivation: Full sun/light shade. Rich well drained soil. Moderate watering.
Size: Approx. 13cm x 15cm wide
Flowering time: May – June (Gauteng, RSA)
Cold Tolerance: -1°C (short periods)
Released: 2017

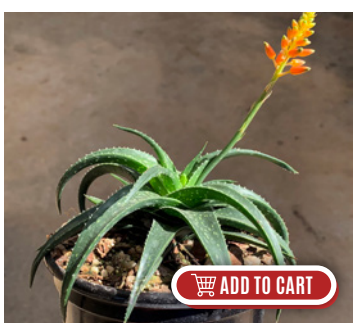

A miniature Aloe best suited to container growing or in rockeries. Very attractive rosette with spines on the leaves. In Winter the foliage turns a very attractive red/purple colour. 'Crunchy' produces pale pink to yellow bicoloured flowers that are unusually sweetly scented!

ALOE 'CUPCAKE'

Cultivation: Full sun/light shade, rich well drained soil moderate watering
Flowers: May - Aug and sporadically throughout the year (Gauteng RSA)
Size: ± 13cm x 15cm
Cold Tolerance: 0°C (short periods)
Released: 2019

A miniature Aloe best suited to containers or in rockeries. 'Cupcake' has unusual, very attractive, open flared flowers, that are white in colour.

ALOE 'FIREFLY'

Cultivation: Light shade, rich well drained soil moderate watering
Flowers: May - Aug and sporadically throughout the year (Gauteng RSA)
Size: ± 13cm x 15cm
Cold Tolerance: 0°C (short periods)
Released: 2010

A miniature Aloe best suited to containers. Deep green recurved foliage. 'Firefly' produces bright, attractive orange to red coloured flowers.

ALOE 'FRECKLES'

Cultivation: Sun, little or lots of water, rich soil
Size: Stemless, seated Aloe, ± 200mm x 250mm
Flowers: Sporadically throughout the year (Gauteng, RSA)
Cold Tolerance: -2°C
Released: 2010

'Freckles' is a stemless Aloe with interesting, attractive spotted foliage and is suitable for containers or group plantings. Unusual peachy orange coloured flowers. It has a medium growth rate and is resistant to Aloe cancer.

ALOE 'FREDDY'

Cultivation: Full sun/light shade, rich well drained soil moderate watering
Flowers: May - Aug (Gauteng RSA)
Size: ± 10cm x 15cm
Cold Tolerance: 0°C (short periods)
Released: 2022

A miniature Aloe best suited to containers. Very attractive textured and coloured foliage. 'Freddy' produces pink to reddish coloured flowers,

ALOE 'GOBLIN'

Cultivation: Light shade, rich well drained soil moderate watering
Size: ± 10cm x 15cm
Flowers: May - Aug and sporadically throughout the year (Gauteng RSA)
Cold Tolerance: 0°C (short periods)
Released: 2019

A miniature Aloe best suited to containers. Very attractive textured foliage with interesting patterns. 'Goblin' produces pink to red ish coloured flowers.

ALOE 'GREMLIN'

Cultivation: Light shade, rich well drained soil moderate watering
Size: ± 10cm x 15cm
Flowers: May - Aug and sporadically throughout the year (Gauteng RSA)
Cold Tolerance: 0°C (short periods)
Released: 2019

A semi miniature Aloe best suited to containers or in rockeries. Very attractive textured and coloured foliage. 'Gremlin ' produces bi-coloured pale pink to creamy yellow flowers.

ALOE 'GRUSTY'

Cultivation: Full sun/light shade, rich well drained soil moderate watering
Size: ± 18cm x 15cm
Flowers: May - Aug (Gauteng - RSA)
Cold Tolerance: 0°C (short periods)
Released: 2019

A semi miniature Aloe best suited to containers or in rockeries. Very attractive textured and coloured foliage. 'Grusty' produces attractive dark pink/ red flowers.

ALOE 'KRIMPIE' AKA KRIMPVARKIE

Cultivation: Full sun/light shade, rich well drained soil moderate watering
Size: ± 15cm x 15cm
Flowers: June - July (Gauteng - RSA)
Cold Tolerance: -3°C (short periods)
Released: 2015

A stemless Aloe best suited to containers or in rockeries. Very attractive rosette with grey incurving leaves. 'Krimpie' produces creamy white to pink/red bi-coloured flowers on dense inflorescences.

ALOE 'MADAGASCAR'

Cultivation: Light shade, rich well drained soil moderate watering
Size: ± 15cm x 20cm
Flowers: May /June (Gauteng RSA)
Cold Tolerance: 0°C (not for prolonged periods)
Released: 2024

A semi miniature clump forming Aloe best suited to containers or rockeries with attractive long recurved green leaves. 'Madagascar' produces spectacular bi-colour red/pink to yellowish flowers in profusion.

Aloe 'Marilyn'

Cultivation: Light shade, rich well drained soil moderate watering
Size: ± 13cm x 15cm
Flowers: June - Aug and sporadically throughout the year (Gauteng RSA)
Cold Tolerance: 0°C (short periods)
Released: 2019

A miniature Aloe named after Marilyn Monroe that is best suited to containers or in rockeries. 'Marilyn' has unusual, very attractive and special, open flared flowers, that are pink/red in colour.

Aloe 'Rascal'

Cultivation: Full sun/light shade. Rich well drained soil. Moderate watering.
Size: Approx. 30cm x ?m
Flowering time: Randomly during the year (Gauteng, RSA)
Cold Tolerance: -2°C (short periods)
Released: 2016

A small clump forming Aloe with very attractive toothy green foliage. Ideal as a container plant or in rockeries. Red/Pink flowers. Resistant to Aloe Cancer.

Aloe 'Skittles'

Cultivation: Full sun/light shade, rich well drained soil moderate watering
Size: ± 18cm x 15cm
Flowers: May - August (Gauteng - RSA)
Tolerance: 0°C (not for prolonged periods)
Released: 2018

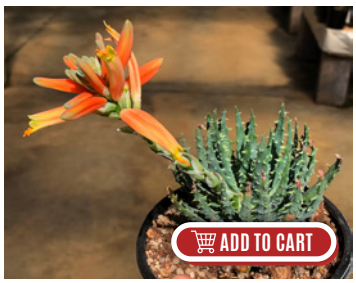

A semi miniature Aloe best suited to containers or in rockeries. Very attractive textured and coloured foliage. 'Skittles' produces pale pink to bi-coloured flowers.

Aloe Snowdrops

Cultivation: Light shade, rich well drained soil moderate watering
Size: Approx. 15cm high x 15cm wide
Flowers: June - August and sporadically throughout the year (Gauteng RSA)
Cold Tolerance: -0 degrees celsius (not for prolonged periods)
Released: 2024

A miniature clump forming Aloe best suited to containers or rockeries. Neat, rosettes with attractive deep green foliage. 'Snowdrops ' produces a prosion of stunning white flowers.

Aloe 'Sonic'

Cultivation: Full sun/light shade, rich well drained soil moderate watering
Flowers: June - July (Gauteng - RSA)
Size: ± 10cm x 15cm
Cold Tolerance: - 3 °C (not for prolonged periods)
Released: 2019

A stemless clump forming Aloe best suited to containers or in rockeries. Very attractive rosette with grey incurving leaves with spines on the leaves. 'Sonic' produces pink to red ish flowers.

Aloe 'Spikkels'

Cultivation: Full sun/light shade, rich well drained soil moderate watering
Size: ± 13cm x 15cm
Flowers: May - Aug (Gauteng - RSA)
Tolerance: 0°C ((short periods)
Released: 2018

A miniature stemless Aloe best suited to containers. Neat rosette, very attractive spotted foliage. 'Spikkels' produces pale pink to red ish coloured flowers.

Aloe 'Sugar'

Cultivation: Light shade, rich well drained soil moderate watering
Flowers: May - Aug and sporadically throughout the year (Gauteng RSA)
Size: ± 10cm x 12cm
Cold Tolerance: 0 °C (Short periods)
Released: 2022

A miniature Aloe best suited to containers. Neat, compact rosettes with attractive pale green/ white textured foliage. 'Sugar' produces pink to redish flowers.

Aloe 'Tango'

Cultivation: Sun/light shade, rich, drained soil, medium or less watering
Size: 250mm x 300mm
Flowers: Randomly all year round
Cold Tolerance: Up to -3°C
Released: 2015

The best attributes of 'Tango' is its ability to sporadically flower all year round and its bi-coloured blooms which are very attractive. Good re blooming also contributes to sustaining a food source for insects and birds. It is well suited to small gardens and mass planting as well as container gardening. Good disease resistance!

Aloe 'Tequila'

Cultivation: Light shade, rich well drained soil moderate watering
Size: ± 15cm x 20cm
Flowers: May - Aug and sporadically throughout the year (Gauteng RSA)
Cold Tolerance: 0°C (Short periods)
Released: 2019

A semi miniature stemless Aloe best suited to containers or in rockeries. Very attractive mottled/ spotted foliage. 'Tequila' produces pink to reddish coloured flowers

Aloe 'Tickey'

Cultivation: Full sun/light shade. Rich well drained soil. Moderate watering
Size: ± 4cm x 10cm
Flowers: Early Winter and sporadically throughout the year (Gauteng, RSA)
Cold Tolerance: -1°C (Short periods)
Released: 2019

A miniature, stemless, suckering Aloe best suited to containers. Easy growing with attractive and compact foliage. Large pink flowers on a small plant. Tickey is resistant to Aloe Cancer.

Aloe 'Tom Thumb'

Cultivation: Light shade, rich well drained soil moderate watering
Size: ± 8cm x 15cm
Flowers: May - Aug and sporadically throughout the year (Gauteng, RSA)
Cold Tolerance: 0°C (Short periods)
Released: 2019

A miniature, short ,multi-stemmed Aloe best suited to containers or rockeries. Fast and easy growing with attractive speckled foliage. Tom Thumb is resistant to Aloe Cancer and flowers randomly throughout the year.

Aloe 'Tuffy'

Cultivation: Full sun/light shade. Rich well drained soil. Moderate watering.
Size: ± 8cm x 12cm
Flowers: Early Winter and sporadically throughout the year (Gauteng, RSA)
Cold Tolerance: -1°C (short periods)
Released: 2019

A miniature, stemless, suckering Aloe best suited to containers. Easy growing with attractive green foliage with white specks and tubercles. Compact plant, pink flowers. Tuffy is resistant to Aloe Cancer.

Gasteraloe 'Lucky'

Cultivation: Light shade, rich well drained soil moderate watering.
Size: ± 10cm X 15cm
Flowers: June - Aug Gauteng - RSA)
Cold Tolerance: 0°C (short periods)
Released: 2019

A miniature Aloe x Gasteria hybrid best suited to containers. Unusual foliage that turns an attractive red/purple colour in Winter. 'Lucky' produces very beautiful pale pink to cream bi-coloured flowers .

Aloe pests and diseases

Fungal diseases:

Rust:	Black spot:	Root Rot and dampening off:	Bacterial Crown rot:
It is highly recommended to cut off all affected leaves and burn them before commencing spraying with any of the appropriate fungicides. Virikop (copper based fungicide) with G49 (wetting agent) or Picanta (wetter/sticker) is an effective preventative spray for Aloe rust. Odeon 720SC (Chlorothalonil) fungicide) with G49 (wetting agent) or Picanta (wetter/ sticker) is also an effective preventative spray for Aloe rust.	This is a complex problem caused by more than one fungus, some plants are more susceptible than others, and soil PH and lack of nutrients can also affect susceptibility. If a plant is extremely susceptible it is recommended, you destroy it and replace it with a more resistant variety. Virikop (copper based fungicide) with G49 (wetting agent) or Picanta (wetter/sticker) is an effective preventative spray for black spot.	Most problematic with seedlings or hyper arid Aloes, overwatering or sowing seed too thickly will give rise to ideal conditions for fungi and bacteria to develop. Virikop (Copper based fungicide) can be used to treat damping off, on Aloe seedlings.	A bacterial infection in the crown of the Aloe that causes the crown to rot and die. In single stem Aloes it can cause the death of the whole plant, multi stem varieties will regrow. If treated before the rot goes to deep, the plant can be saved. Scoop out as much rotten material as possible and densely pack the cavity with sandy garden soil. This is very effective. Virikop (Copper based fungicide) can be used to treat crown rot off on Aloes.

Pests:

General insects: This includes Snout beetles, various beetles, grasshoppers, caterpillars, aphids, mealy bug, eight-back bug, Hardloop Gogga (Psyllid) and scale. For home use alternating applications of Seizer (Bifenthrin based insecticide) and Organicide Plus (natural insecticide) with a good wetting agent like G49 or Picanta is effective for controlling most insects most of the time. For a severe scale infestation one can use a mix of Seizer (Bifenthrin based insecticide) and Oleum (Narrow fraction mineral oil) or SK Eco oil and a wetting agent like G49, Picanta. Once the scale is dead it generally does not fall off and must be rubbed off with a cloth or soft brush.

Aloe Cancer/Aloe Mite: The mites live in the Aloe tissue and on the leaf surface in the crown so controlling them is often harder than with other mites. The mites cause the plant to produce unsightly deformations, known as galls/cancer on the plant. The home gardener/collector must be vigilant and deal with Aloe cancer immediately as it occurs, if the problem is ignored and the mites get into all your Aloes it will become a difficult task to eradicate them, full cover spray Seizer (Bifenthrin based insecticide) with Picanta (wetter/sticker) immediately after cutting out galls, this is vital to ensure mites don't spread. Natural insecticides like Organicide Plus, Biogrow's Pyrol, Bioneem and Neudosan can be used as a preventative spray and to stop mites spreading from one Aloe to another in your collection, they generally break down very quickly though and more frequent spraying may be required. An extremely important aspect of dealing with Aloe mites is to alternate miticides from different chemical classes or else the mites become resistant to the chemicals extremely quickly! It is always best to physically remove (cut out) the deformities/growths caused by the mite before spraying, be sure to use a good wetting agent like G49, Picanta when spraying for mites. Burn these growths, don't leave them lying around your garden and don't put them in your compost heap! Even if one succeeds in killing the mites without removing the galls which is extremely difficult with home use products the galls will persist for many months and are very unsightly.

BULBINE

Bulbine Wildfire is a more refined version of traditional orange Bulbine frutescens. Wildfire is a suckering plant that quickly forms a neat clump that does not spread untidily. Bulbine WildFire most likely has the same beneficial medicinal properties as Bulbine frutescens. It is free flowering, sun loving and resistant to heat and drought.

Bulbine Wildfire

var. 'ANDWIL'
PBR ZA 20207124

Cultivation: Full sun to light shade. Rich well drained soil. Moderate watering.
Size: ± 30cm x 40cm
Flowers: Spring, Summer & Autumn. Flowers in Winter in warm areas. (Gauteng, RSA)
Cold Tolerance: -1°C (short periods)
Released: 2012

A neater, more refined version of traditional orange Bulbine frutescens. WildFire is a suckering plant and does not spread (run) above ground like Bulbine frutescens. This means that Wildfire is neater and more controlled is not prone to having dead patches like Bulbine frutescens. WildFire is drought resistant and also lower maintenance than Bulbine frutescens.

DIETES

Dietes Milky Way is a striking variegated form of Dietes that has the same resilient, clump forming habit of traditional species. It is a THRILLER in containers that occasionally produces large, pale yellow flowers. Dietes Milky Way is an ideal landscaping plant that is resistant the to dead leaf tips that occurs within the rest of the genus.

Dietes Milky Way

var. 'DBV001'
PBR Pending

Cultivation: Full sun/light shade, rich well drained soil, moderate watering
Size: ± 1m x 1m
Flowers: Sporadic flowering throughout Summer
Cold tolerance: Mature plants size may vary according to climate conditions

Dietes Milky Way is a striking variegated form of Dietes that has the same resilient, clump forming habit of traditional species. It is a THRILLER in containers that occasionally produces large, pale yellow flowers. EURYOPS

Euryops 'Infinity Gold'™

Cultivation: Full Sun/light shade
Size: Mature plants size may vary according to climate conditions approx. 50cm x 50cm
Flowers: Profusely in late Winter, Spring and Summer, with sporadic blooming in the rest of the year too
Cold tolerance: Minus 3 degrees celsius (not for prolonged periods)
Released: 2024

A very attractive and profuse flowering Euryops, neat and compact, no, pruning required! Easy and fast growing. Brilliant heat and drought tolerance. Indigenous.

GAZANIA

Gazanias are universally popular ground covers that originate from Southern Africa. They attract and feed numerous species of butterflies, bees, and other beneficial insects. Gazania SunCarpet was bred to be more resistant to heat and drought. It is free flowering, sterile and self cleaning.

GAZANIA SUNCARPET®

var. 'DwGzHy01'
PBR Pending PT 10215

Cultivation: Full sun/light shade. Drought and heat tolerant, HIGH resistance to diseases that commonly affect Gazanias. Sterile variety
Size: ± 15cm x 40cm
Flowers: Throughout the year
Cold tolerance: - 4°C (Short periods)
Released: 2022

Gazanias are universally popular ground covers that originate from Southern Africa. They attract and feed numerous species of butterflies, bees, and other beneficial insects. Gazania SunCarpet was bred to be more resistant to heat and drought. It is free flowering, sterile and self cleaning.

KNIPHOFIA

Red hot pokers are endemic to Africa. They like rich, well drained soil and attract sunbirds, bees and butterflies.

KNIPHOFIA 'SPICY'

Cultivation: Full sun/light shade, rich well drained soil, moderate watering
Size: ± 80cm x 80cm Mature plants size may vary according to climate conditions
Flowers: Spring/Summer with sporadic re-blooming
Cold tolerance: - 4°C (Short periods)
Released: 2022

A great new Kniphofia with bright bi-coloured flowers, orange/red opening to deep yellow. 'Spicy' is also a good re-bloomer and has excellent resistance to bacterial rot.

OSTEOSPERMUM

OSTEOSPERMUM KAROO are sun loving, spreading plants available in two colours. These free flowering ground covers love extreme heat, withstand dry conditions and are resistant to fungal diseases. Butterflies and bees love them.

OSTEOSPERMUM 'KAROO CREAM'

Cultivation: Heat, drought and disease tolerant
Size: ± 15cm x 70cm
Flowers: Profusely in late Winter, Spring and early Summer, with sporadic blooming in the rest of the year
Cold tolerance: - 3°C (Short periods)

OSTEOSPERMUM KAROO are sun loving, spreading plants available in two colours. These free flowering ground covers love extreme heat, withstand dry conditions and are resistant to fungal diseases. Butterflies and bees love them.

OSTEOSPERMUM 'KAROO PURPLE'

Cultivation: Heat, drought and disease tolerant
Size: ± 15cm x 50cm
Flowers: Profusely in late Winter, Spring and early Summer, with sporadic blooming in the rest of the year
Cold tolerance: - 3°C (Short periods)

OSTEOSPERMUM KAROO are sun loving, spreading plants available in two colours. These free flowering ground covers love extreme heat, withstand dry conditions and are resistant to fungal diseases. Butterflies and bees love them.

Osteospermum 'Karoo White'

Cultivation: Heat, drought and disease tolerant
Size: ± 15cm x 70cm
Flowers: Profusely in late Winter, Spring and early Summer, with sporadic blooming in the rest of the year
Cold tolerance: - 3°C (Short periods)

OSTEOSPERMUM KAROO are sun loving, spreading plants available in two colours. These free flowering ground covers love extreme heat, withstand dry conditions and are resistant to fungal diseases. Butterflies and bees love them.

PLECTRANTHUS

The PLECTRANTHUS MAGIC MONA range are a breakthrough in Plectranthus breeding. The set of three eye catching colours, have much larger flowers than conventional Plectranthus. They are repeat bloomers and the plants are neatly structured with attractive foliage. The Magic Monas are well suited to containers and gardens in semi shade.

Plectranthus Magic Mona®

var. 'DE WET F'
PBR ZA 20207124

Cultivation: Semi shade to shade
Size: ± 6cm x 50cm
Flowers: profusely in early Summer and Autumn with sporadic blooming during the rest of the year
Cold Tolerance: 0°C (Short periods)
Released: 2023

A great breakthrough in Plectranthus breeding! Much larger flowers than Plectranthus Mona Lavender with a neater more structured plant too. Magic Mona flowers are very eye catching shade of violet purple! Well suited to gardens and containers. Magic Mona also has a long flowering period.

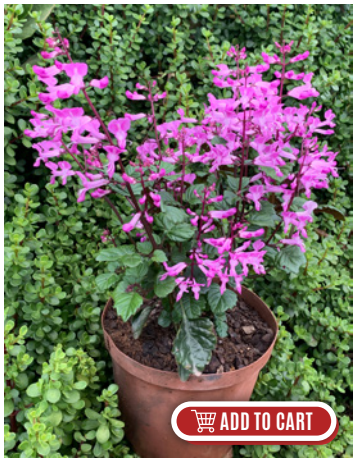

Plectranthus Magic Mona Pearl

var. 'White 001'
PBR Pending

Cultivation: Semi shade to shade
Size: ± 60 x 50cm
Flowers: Profusely in early Summer & Autumn with sporadic blooming rest of the year
Cold Tolerance: 0°C (Short periods)
Released: 2024

The PLECTRANTHUS MAGIC MONA range are a breakthrough in Plectranthus breeding. The set of three eye catching colours, have much larger flowers than conventional Plectranthus. SALVIA

Salvia Heat Hero

var. 'SALHH'
PBR Pending

Cultivation: Full Sun/light shade
Size: Mature plants size may vary according to climate conditions approx. 70cm x 80cm
Flowers: Profusely in late Winter, Spring and Summer, with sporadic blooming in the rest of the year too
Cold tolerance: Minus 3 degrees celsius (not for prolonged periods)
Released: 2024

A very attractive and profuse blue flowering Salvia! Easy and fast growing. Brilliant heat and drought tolerance. Indigenous.

Salvia 'Magic Spires'

Cultivation: Full sun/light shade.
Size: ± 60cm x 50cm
Flowers: Profusely in late Winter, Spring and Summer, with sporadic blooming in the rest of the year
Cold tolerance: - 3°C (Short periozds)
Released: 2020

Salvia 'Magic Spires' Is a free flower perennial shrub that grows easily and fast. It has bright green leaves and showy, upright blueish-purple flower spikes.

Salvia Purple Profusion

Cultivation: Full Sun/light shade
Size: Mature plants size may vary according to climate conditions approx. 70cm x 80c
Flowers: Profusely in late Winter, Spring and Summer, with sporadic blooming in the rest of the year too
Cold tolerance: minus 3 degrees celsius (not for prolonged periods)
Released: 2024

A very attractive and profuse, shrub like, Purple Salvia! Easy and fast growing.

Salvia Super Red

var. 'DWSAHYB03'
PBR Pending

Cultivation: ull Sun/light shade
Size: Mature plants size may vary according to climate conditions approx. 35cm x 35cm
Flowers: Profusely in late Winter, Spring and Summer, with sporadic blooming in the rest of the year too
Cold tolerance: 0 degrees celsius (not for prolonged periods)
Released: 2024

A breakthrough in Salvia coccinea breeeding, doesn't self seed, very attractive and profuse red flowering Salvia! Easy and fast growing. Improved heat and drought tolerance.

TECOMARIA

The Tecomaria SUNLOVERS COMPACT range are a noticeable improvement on the traditional Tecomaria capensis.

They are a set of compact, free flowering shrubs that are available in five distinct colours. Tecomaria are easy, fast growing shrubs that cannot survive extreme cold. Released in 2019.

TECOMARIA SUNLOVERS® - COMPACT GOLD

var. 'DWOY001'
PBR ZA 20227738

Cultivation: Full Sun to light shade
Flowers: Spring, Summer & Autumn (winter in warm areas)
Size: ± 1,1 x 1,1m
Cold Tolerance: 0°C (short periods)
Released: in 2019

A tremendous achievement in Tecomaria breeding! Much more compact, shorter and more free flowering than traditionallight orange Tecomaria capensis forms that are available in the industry. SunLovers® Compact Orange produces masses of Gold (Yellow/Orange) flowers.

TECOMARIA SUNLOVERS® - COMPACT ORANGE

var. 'DWOR001'
PBR ZA 20227737

Cultivation: Full Sun to light shade
Flowers: Spring, Summer & Autumn (Winter in warm areas)
Size: ± 1,2 x 1,2m
Cold Tolerance: 0°C (short periods)
Released: in 2019

A tremendous achievement in Tecomaria breeding! Much more compact, shorter and more free flowering than traditional Orange Tecomaria capensis forms that are available in the industry. SunLovers® Compact Orange produces masses of vivid orange flowers.

TECOMARIA SUNLOVERS® - COMPACT PINK

var. 'DWPI001'
PBR Pending

Cultivation: Full Sun to light shade
Flowers: Spring, Summer & Autumn (Winter in warm areas)
Size: ± 1,3 x 1,1m
Cold Tolerance: 0°C (short periods)
Released: in 2019

A tremendous achievement in Tecomaria breeding! Much more compact, shorter and more free flowering than traditional pink/salmon Tecomaria capensis forms that are available in the industry. SunLovers® Compact Pink produces masses of charming Gold pink flowers.

TECOMARIA SUNLOVERS® - COMPACT RED

var. 'DWRE001'
PBR ZA 20227740

Cultivation: Full Sun to light shade
Flowers: Spring, Summer & Autumn (Winter in warm areas)
Size: ± 1,3 x 1,1m
Cold Tolerance: 0°C (short periods)
Released: in 2019

A tremendous achievement in Tecomaria breeding! Much more compact, shorter and more free flowering than traditional red Tecomaria capensi s forms that are available in the industry. SunLovers® Compact Red produces masses of stunning red flowers.

TECOMARIA SUNLOVERS® - COMPACT YELLOW

var. 'DWYE001'
PBR ZA 20227741

Cultivation: Full Sun to light shade
Flowers: Spring, Summer & Autumn (Winter in warm areas)
Size: ± 1,3 x 1,1m
Cold Tolerance: 0°C (short periods)
Released: in 2019

A noticeable improvement on the traditional yellow Tecomaria capensis available in the industry. Shorter, more compact and more free flowering with finer textured foliage. SunLovers® Compact Yellow produces masses of yellow flowers.

This is where it all began

After growing and collecting Aloes for about a year since 1972, I started making hybrids between different selected species, to see what the results would be. The fascination of observing the expression of the combined genetics quickly resulted in an unstoppable and lasting obsession!

The commercial potential soon became evident and the primary goal shifted towards creating Aloe hybrids that are beautiful yet suitable for everyone's gardens. After gaining some success, I started wondering about our amazing diversity of other Southern African genera and what secrets their genetics may hold. Survival was tough and I was almost always on the brink of liquidation. I ambitiously built koi ponds, did landscaping and started CND Nursery, but this left little time and resources for plant breeding.

I started exploring Agapanthus and a few other genera initially and also released a few plants of which Aloe Hedgehog and Agapanthus Blue Ice were the most successful. In 2005 I bought a property in Hartbeespoort so that I could grow plants for CND Nursery and expand the breeding. I called it The Aloe FARM.

Soon after this, I employed the equally enthusiastic young Quinton Bean and the breeding speeded up. We focused on Agapanthus and Aloes whilst collecting and doing exploratory cross pollination of several other genera that seemingly had potential. Most attempts were unsuccessful but tenacity won the day - little by little, we gained a broader base of breeding plants and gained lots of experience.

Poor representation by inadequate agents and laboratory failures were extremely disappointing experiences that wasted the potential good plants and set us back many years. Ultimately however, our work was rewarded by associating with good people like Jacques Malan (Malanseuns) and Peter van Rijssen (Planttip).

Recognition and awards came aplenty, but only after many many years. At first, I regarded the awards we won as "nice, thank you", but it is important recognition that one should embrace. Plant breeding may be a lot of fun and my "hobby gone wrong!", but seeing our plants being enjoyed and loved by many around the world is the greatest reward.
