

LANDSCAPE FAVOURITES

Bred by DE WET PLANT BREEDERS

These superior landscape plants were bred by Andy de Wet and Quinton Bean of De Wet Plant Breeders for our warm and sunny South African gardens. Many have won several prestigious international awards.

The aim of this publication is to assist landscape architects and landscape contractors with the selection of exciting new varieties that may aid them in designing exceptional gardens with a unique and fresh Southern African look.

These De Wet Super Plants grow fast and flower abundantly in bright colours, and generally perform well even when neglected. Most varieties attract birds, bees and other beneficial insects. For best results plant in rich, loose soil with ample compost and preferably with bonemeal or organic 2.3.2.
